

COVID-19 Testing Options for Patients NOT Experiencing COVID-19 Symptoms

As we continue to navigate the COVID-19 pandemic, MedStar Health remains committed to providing the most appropriate and timely access to Urgent Care and COVID-19 testing options for our patients.

If you are NOT experiencing COVID-19 symptoms, below are several COVID-19 testing options available to you. These options will help decrease your wait time and allow you to choose the test option that best serves your needs safely.

Urgent Care Centers:

- All MedStar Health Urgent Care visits for COVID-19 exposure or symptomless testing (pre-operative, return to work, return to school) **require you to save your spot online ahead of time.** www.medstarhealth.org/mhs/urgent-care
This allows us to streamline and space out the volume of patients throughout the day. We are unable to follow important physical distancing measures if we have too many patients on-site at one time.
- If we do not have availability at your regularly preferred walk-in location, you can book for the next available date/time at that location or look for other locations nearby.

At-Home Testing Options:

- Below are three companies that MedStar Health has collaborated with for at home polymerase chain reaction (PCR) COVID-19 testing options. Any patient can order these tests online and they will be shipped to your home within 24 hours*, with results often faster than our Urgent Care centers. These home-based tests are available for all ages:
 - **Vault:** Saliva-based home PCR testing. \$150 per person. Ships to you within 24 hours* and results available within 36 hours*. You can submit to insurance for reimbursement. (all ages) www.vaulthealth.com/covid
 - **Let's-Get-Checked.com:** Self-administered nasal swab home PCR testing. \$119 per person. Ships to you within 48 hours* and results are typically available within 48 hours*. You can submit to insurance for reimbursement. (ages 18+) www.letsgetchecked.com
 - **PIXEL by LabCorp Home Testing:** Self-administered nasal swab home PCR testing. You can enter insurance information when ordering, so no up-front cost. Results can take approximately 3-5 days*. (ages 18+) www.pixel.labcorp.com/covid-19-survey

*Times are approximate and subject to change without notice.

MedStar eVisit (Telehealth):

- MedStar Health offers free (for a limited time) telehealth video visits with Urgent Care, Primary Care, and ER providers. If you prefer to have a MedStar eVisit, most questions and concerns can be addressed virtually instead of waiting for an in-person evaluation. If testing for COVID-19 is needed, your provider can send you an order to go to a testing tent location to prevent wait times in Urgent Care. www.medstar-evisit.com

It's how we treat people.
