

Features of the Inpatient Rehabilitation Center include:

- Ability to treat up to 49 patients in 37 private rooms and six semi-private rooms.
- **B'more Independent Way Room:** features a modified car for transfer training, grocery store, crosswalk sign, and house with ramps, doors, and a mailbox which will help patients transition from the hospital to the community.
- **Modern Activities of Daily Living Apartment:** equipped with a washer and dryer, seating area, kitchen, and bedroom with bathroom where patients and families can practice daily tasks as they prepare to return home.
- **Training bathroom** with adjustable sink for hair washing, tub to simulate getting in and out for bathing.
- **Therapy Gym** featuring multiple devices to help patients regain mobility, including ZeroG™, a dynamic body weight support system track to assist patients with walking; Bioness, therapy devices for foot drop, thigh weakness and hand paralysis; Neuromuscular Electrical Stimulation (NMES), PENS, and FES bike which provides electric stimulation to muscles to improve tone and facilitate motor pathway re-education.
- **Ceiling lifts** which allow patients with limited mobility to be taken to the bathroom in patient rooms, and easily transfer from the bed or mat to a chair.
- **Technology Room** that features many low- and high-tech devices, such as iPads, Roomba vacuum, low vision devices, robotic utensils, and automatic medication dispensers.
- **Low-Stimulation Gym:** enabling patients with brain impairment to have improved focus on therapy with reduced sound and light distractions.
- A room for Nash the facility dog, who helps patients practice everyday activities such as taking on and off a shirt, improving upper body strength or movement through brushing, or walking him in the department.
- **A multipurpose area room** which offers stunning views of Baltimore for patients participating in leisure activities during therapy. This area is also the location for rehab dining, an occupational and speech therapy driven lunch group for patients that benefit from assistance during meals.
